

FASTPRINT

OUTPUT MANAGEMENT FOR HOSPITALS

FastPrint is FormFast's solution for automatic output of packets of hospital forms, wristbands, labels, financial documents, and checks.

An essential tool for streamlining the registration process, FastPrint allows for patient information to be imprinted onto wristbands and groups of electronic forms (eForms) and automatically routed to the correct printer(s).

BAR-CODED FORMS FOR INSTANT ARCHIVAL

In addition to patient demographic information, FastPrint generates patient-specific bar-codes that allow for the completed document to be scanned directly into the EMR's archiving module.

FORM DESIGN SIMPLIFIED

All FormFast products come bundled with Form Designer, FormFast's solution for converting paper documents, electronic files, and other formats in feature-rich eForms in a few quick steps.

IMPROVED PRODUCTIVITY AND REDUCED COST

By eliminating pre-printed forms in exchange for FormFast eForms, hospital employees spend less time & resources managing paper documents. Plus the cost reduction from replacing pre-printed forms is often significant.

BENEFITS OF OUTPUT AUTOMATION

Hospitals appreciate the productivity gains and cost savings associated with FormFast's automated output solution. There is also an improvement in patient safety as data collected in the HIS is used by the FormFast system to imprint the forms with patient demographics, ensuring positive patient ID.

With print management solutions more focus can be put on patient care at points of service, rather than having to manually select, organize, and label stacks of forms, improving the patient experience.

Features

- Electronic Form Designer with OCR
- Logic-based Forms Selection
- Electronic Demographic Imprinting
- Dynamic Bar-code Generation
- Print Job Designer
- Print Manager Service
- HL7 Patient Tracker
- IP Data Listener Function
- Visual Data Mapping

Benefits

- Easy archival of documentation into the EMR
- Improved operational efficiency at registration
- Cost savings from elimination of pre-printed forms
- Seamless integration with HIS and archiving systems
- Improved positive patient identification
- Less time required for manual tasks allows registration staff to focus on quality care delivery

FASTPRINT

ADT and Print Stream Connections

FastPrint features integration with HIS systems by either receiving ADT messages or print stream data from the registration system. This ensures accurate exchange of data and maintains the integrity of clinical information.

Patient Demographic Imprinting

Eliminate the need to manually label forms with identifiers. FastPrint digitally imprints the demographics on the electronic forms during output. This saves time for registration staff and reduces human error.

Dynamic Bar-code Generation

Patient-specific bar-codes are produced on the forms as needed. During scanning and archiving, the forms are automatically indexed as the bar-codes streamline this process.

Visual Data Mapping

In order to ensure captured data and bar-codes from the registration system populate in the correct location on the form, FastPrint offers an intuitive visual interface to simply drag and drop data elements onto the form image.

Logic-based Forms Selection

FastPrint accelerates the admissions workflow by automatically selecting, grouping, and printing the right forms from the hospital's library of electronic forms. The system knows which forms to choose by analyzing the patient's information and running it against pre-defined selection criteria.

Print Manager Service

FastPrint is recognized for being a highly-reliable platform for automated output. The print manager service gives IT staff peace of mind that important clinical forms or financial documents can be printed anywhere across the enterprise when needed at any time.
