

FormFast®

Integrated eForms Library

BARCODED eFORMS ON-DEMAND

FormFast's integrated eForms Library solution allows hospitals to produce patient-specific documentation on-demand.

FormFast eForms are organized and accessible in an online repository, imprinted dynamically for archival, and can be printed as needed by clinical staff.

IMPROVED FORMS STRATEGY

FormFast eliminates the need for pre-printed paper forms, replacing them with electronic versions accessible by hospital staff online. Only current versions of approved eForms are displayed, eliminating obsolescence.

Groups of electronic forms are organized into packets for quick selection, and output options are configured for instant routing to the correct printer or printers based on output criteria.

INCREASED CLINICAL CONTINUITY

Featuring interoperability with core hospital systems, FormFast's eForms Library solution contributes to the continuity of information during the patient's visit.

Patient demographics collected during registration are sent to the FormFast platform via ADT or print stream connections upon registration. FormFast creates an active patient list, allowing clinical units to generate patient-specific wristbands, labels, consent forms, and other documentation on-demand.

Unique identifiers captured by the HIS are imprinted on the electronic forms dynamically by the FormFast platform. Barcoded patient and form identifiers are added to streamline the archival process and ensure correct submission into the electronic medical record.

BUSINESS CASE

Manual indexing of forms is inefficient and error-prone. Forms automation is a preferable way to prepare documents for electronic archival in the EMR.

FEATURES

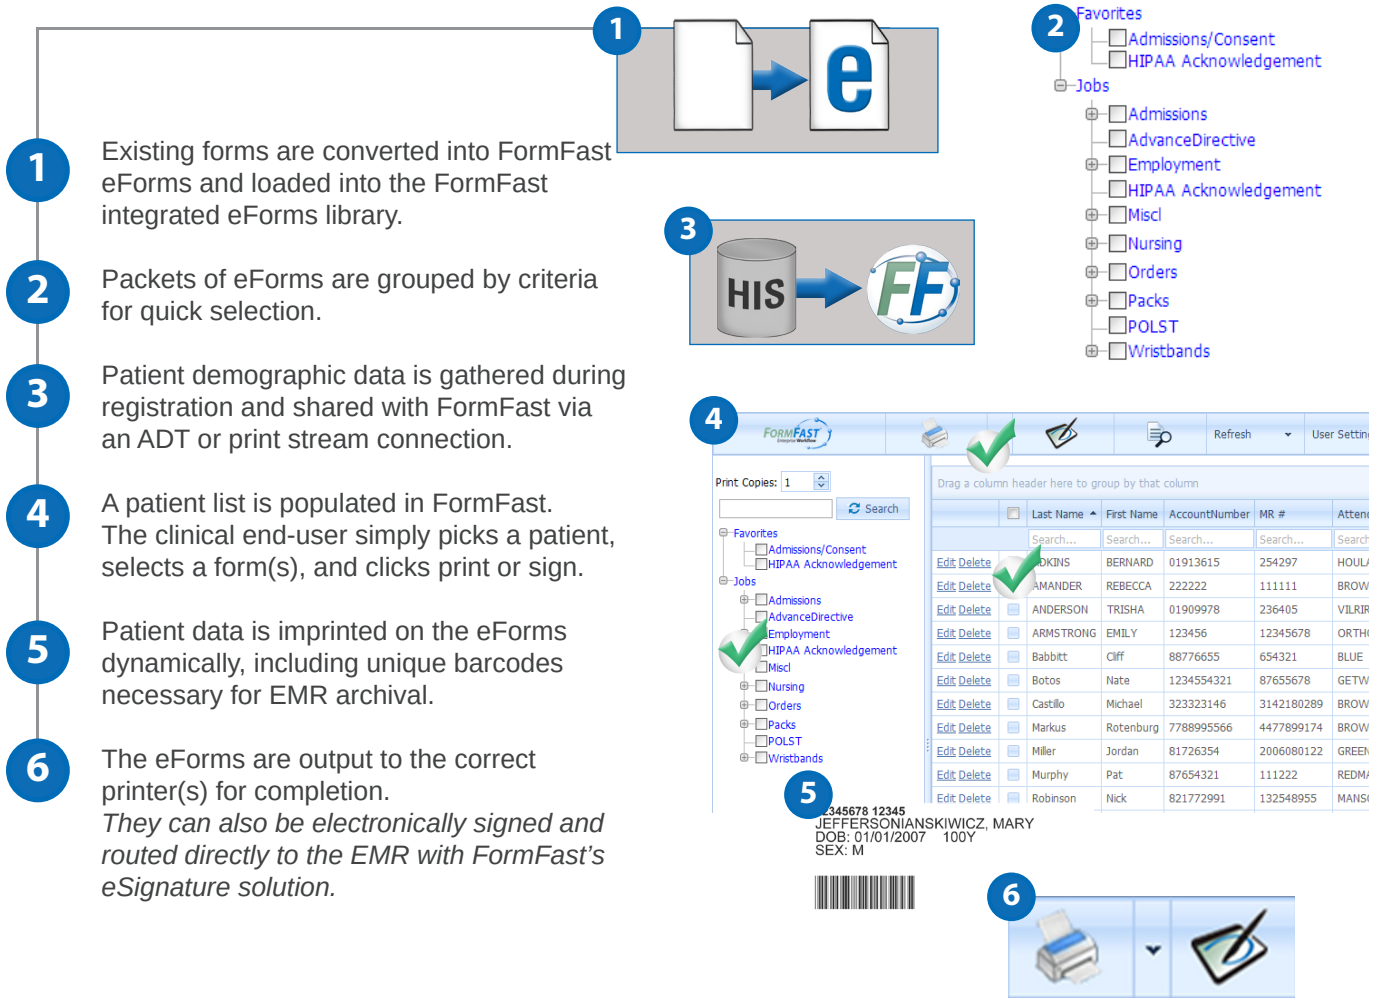

- HIS integration via ADT or print stream connections
- Dynamic patient demographic imprinting
- Barcoding of both patient and form identifiers for proper EMR archival
- Support for electronic patient signature functionality
- Customizable grouping of forms and printer assignment

KEY BENEFITS

- Improved clinical continuity
- Easy access to electronic versions of forms online
- Instant preparation of documentations for archival
- Elimination of obsolete pre-printed forms

ELECTRONIC SIGNATURE SUPPORT

FormFast's electronic signature solution works in conjunction with the eForms Library platform to provide additional functionality for capturing patient signatures on eSign devices.

Mobile device support allow clinicians to display electronic forms and collect patient consent comfortably at the bedside.

eSignature by FormFast also supports direct integration with the EMR, allowing for a completely paperless documentation process. The added value of eSignature is the elimination of scanning, improving efficiency in clinical areas and improving compliance.
