

# ADMISSION PACKET AUTOMATION

## AUTOMATING DOCUMENTS AT REGISTRATION

FormFast's integrated Admission Packet Automation solution allows hospitals to produce patient-specific documentation, wristbands, and labels automatically during the registration process.

FormFast eForms are dynamically grouped, barcoded & imprinted for archival and printed based on logic triggered by patient demographics collected from the HIS system.

## IMPROVED FORMS STRATEGY

FormFast eliminates the need for pre-printed paper forms, replacing them with electronic versions. Only current versions of approved eForms are available in

FormFast's platform, eliminating obsolescence. Hospitals also appreciate the cost savings due to the reduction of resources required to produce, store, and manage paper pre-printed forms.

## INCREASED CLINICAL CONTINUITY

FormFast's interoperable admission automation solution contributes to the continuity of information during the patient's visit.

As patient demographics are sent to the FormFast platform, pre-defined logic is used to analyze the patient and produce the correct forms, wristbands, and labels required.

Unique identifiers are automatically imprinted on the electronic forms and wristbands as well as patient-specific barcodes - a critical step to ensure correct submission of documents into the electronic medical record.

## Key Benefits

- Instant preparation of documents for archival
- Elimination of obsolete preprinted forms

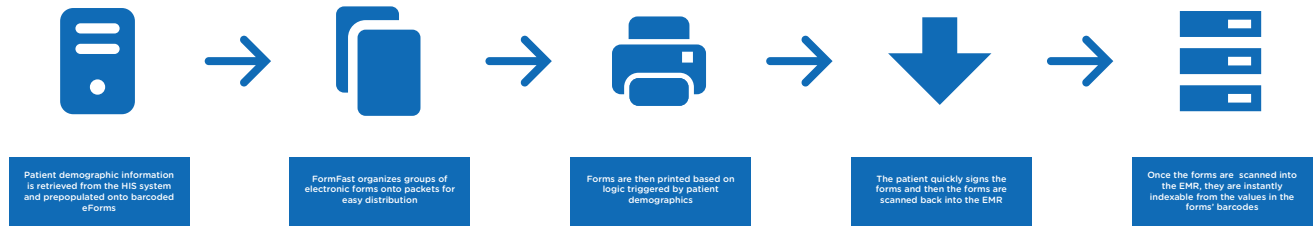

## Features

- HIS integration via ADT or print stream connections
- Dynamic patient demographic imprinting and barcoding
- Pre-defined grouping of forms and printer assignment

## ADMISSION PACKET AUTOMATION

Barcoded forms by FormFast are a simple solution help to automate the admission process and ease the conversion process to the electronic medical record.

## ELECTRONIC SIGNATURE SUPPORT

FormFast's electronic signature solution works in conjunction with the admission packet automation platform to provide additional functionality for capturing patient signatures on e-sign devices.

At the admission desk, patients are presented with an electronic display of the eForms they are required to sign. Using a signature device, they can electronically provide their consent.

The eSignature is applied to the form in realtime giving the patient confidence that know what they are signing.

eSignature by FormFast also supports direct integration with the EMR, allowing for a completely paperless documentation process. The added value of eSignature is the elimination of scanning, improving efficiency in clinical areas and improving compliance.

By adding Electronic Signature to your platform, printing and scanning are eliminated as the patient is able to sign electronically and the document is automatically archived into the EMR
