

MOBILE BEDSIDE CONSENTS

CUT PAPER & MITIGATE RISK

While technology has brought paperless operations to various areas in healthcare organizations, many patient consents are still managed via manual, paper-intensive processes. In support of ongoing efforts to improve efficiency, reduce risk, ensure patient safety and enhance the overall patient experience, many leading healthcare organizations have turned to FormFast to automate workflow.

ENHANCE CONSENT WORKFLOW

FormFast integrates with your EHR system to present the correct documentation for patient signatures on mobile devices - streamlining the consent process. The patient can read the form on a tablet, at their bedside, and conveniently sign the form electronically with their finger or stylus. Staff can then quickly self-sign the form and date-time stamps are automatically applied. Upon the submission of the consent form, it is archived instantly into the EHR - preventing lost information and making documentation instantly visible to the care team.

Your Current Challenge	With FormFast's Informed Consent Solution
Ensuring consent form processes meet industry compliance standards	Confidence that every consent form is properly completed & archived
Managing risk & liabilities associated with outdated consent forms	Forms are guaranteed to always be the most up-to-date version
Enabling a patient view of the full consent during signature capture	Consent form is always displayed in its entirety on a mobile device
Delivering an informed consent process that supports patients' safety	eForms can include a required confirmation review & confirmation field
Verifying a patient's actual comprehension of a consent form	The consent form includes required fields & patient validation features
Minimizing staff time required to manage paper consent forms	The streamlined process allows staff to spend more time with patients
Decreasing time spent by OR staff managing consent forms in the EHR	Seamless integration with EHR allows for enhanced automation
Reducing the cost associated with printing, storage & waste	Cut costs associated with paper by digitizing consent forms
Lacking the capability to electronically capture multiple signatures	Enable multiple fields for all required patients, physicians & witnesses
Signing with a tethered device is difficult for patients lying in a bed	Truly mobile capabilities provide an optimal viewing experience
Lacking ability for various patient input in current consent format	Checkboxes, drop downs & fillable fields ensure patient understanding

MOBILE BEDSIDE CONSENTS

**Risk Manager: Elizabeth**

Before implementing FormFast's mobile bedside consent solution, misplaced and outdated forms led to delays and liabilities. The FormFast solution gives Elizabeth piece of mind concerning informed consent compliance for the hospital, as staff are now guaranteed to present patients with the right form, at the right time.

**Registered Nurse: Katherine**

With FormFast, Katherine no longer has to spend time looking for the latest printed consent form, barcode it and manually enter information. She can now navigate directly from the patient record in the EHR and select the electronic consent form - guaranteed to be the approved version - for the patient to comfortably sign on a mobile device.

**Chief Financial Officer: Ryan**

Prior to FormFast, Ryan's team calculated the estimated cost for paper surgical consents to be \$0.30 per page. This calculation includes the cost of paper, toner, printing, scanning, storage and wages. With around 19,500 consents per month and two pages per consent form, mobile bedside consents are saving the hospital at least \$140,400 per year.

**Operating Room Nurse: Brenda**

Brenda used to spend significant time confirming the presence of a consent form before a procedure, which often led to delays. With FormFast, consent forms are available immediately in the EHR after signatures are captured and the physician's signature is guaranteed to be included.

**Patient: Susan**

Susan is expecting quality care during her inpatient stay and will have the opportunity to provide feedback through the HCAHPS survey. She feels properly educated about the procedure to take place and is confident the staff understand her wishes.

MOBILE BEDSIDE CONSENTS

MOVING TO PAPERLESS CONSENT FORMS

Technology has brought paperless operations to many areas across healthcare organizations, but consent processes are often still a lingering source of paper forms and slow, manual processes.

With FormFast, you can electronically capture the appropriate consents at a patient's bedside on a mobile tablet. Consent documents are instantly archived, preventing lost documents, expediting care and keeping your healthcare organization in compliance.

STREAMLINING CONSENT WORKFLOW

FormFast integrates with your EHR system to present the correct documentation for patient signatures on mobile devices - making consent processes streamlined. The patient can read the form on a mobile device, and conveniently sign the form electronically with their finger or stylus from their bedside.

Staff can then quickly self-sign the form and date-time stamps are automatically applied. Upon the submission of the consent form, it is archived into the EHR - preventing lost information and making documentation instantly visible to the care team.

CUTTING CONFUSION AND MITIGATING RISK

A common challenge for many hospitals today is that patients do not always thoroughly understand the fundamental information regarding their treatment - even after a consent form has been signed. FormFast plays a critical role in digitizing and simplifying the informed consent process - for staff and for patients.

As leading healthcare organizations realize the associated risk and liabilities associated with inefficient consent processes, they have turned to FormFast to help ensure proper consent form management and to enhance patient education.

Solution Benefits

- Ensure compliance
- Manage risk and reduce liability
- Promote patient safety
- Deliver a better patient experience
- Boost staff productivity
- Cut paper and costs

MOBILE BEDSIDE CONSENTS

Ensure Compliance

Applying FormFast's workflow technology to the consent process eliminates concerns surrounding lost and improperly completed forms and ensures the proper completion and archival of every consent form.

Manage Risk & Reduce Liability

FormFast eliminates the risks associated with using an outdated consent form and the liabilities associated with incorrect information, as forms are guaranteed to always be the most up-to-date, approved version.

**Promote Patient Safety**

To ensure the patient's understanding of the consent, the consent format is legible and easily enlarged on a tablet for optimal viewing. To avoid confusion, the electronic form can include required field to confirm patient understanding.

Deliver a Better Patient Experience

Where paper forms and tethered mobile devices can make it difficult for patients to read and sign documents when lying in a hospital bed, FormFast's truly mobile capabilities provide an optimal signature experience for patients in a prone position.

**Boost Staff Productivity**

With FormFast, the consent process is streamlined and physicians and staff are available to spend more quality time with patients, as the time required to obtain, label, customize and manage paper consent forms is eliminated.

Cut Paper & Costs

FormFast cuts costs associated with paper, toner, printing, scanning and storage by digitizing consent processes and increasing productivity. On forms costs alone, hospitals can save thousands of dollars per year with FormFast's mobile bedside consents.

**Key Features**

- Seamless EHR system integration
- User-friendly, mobile tablet experience
- Compatible across all tablet device hardware platforms
- Supports multiple signatures on each form image
- On-demand form selection
- Indication of incomplete forms
- Free-text fields for real-time physician and clinician notes
- Checkbox capability for advanced consent options
- Required content review and understanding confirmation fields using patient initials or a checkbox
- Automatic date/time stamp for data integrity
- Immediate archival of completed consent forms
