MODERNIZE YOUR PRE-REGISTRATION PROCESS

Pre-registration is a natural target for process improvement as healthcare organizations seek to accelerate admissions, improve patient experiences, & collect better patient data.

FormFast’s pre-registration solution offers best-of-breed eForms technology, an intuitive patient-centered design, and integration with clinical systems, all contributing to a superior pre-admissions process for patients and staff.

FormFast serves as an add-on for your EHR, providing the robust forms features you need to allow patients to easily complete electronic intake forms before arriving for treatment.

MORE CONVENIENT FOR PATIENTS

Empower your patients to complete pre-registration forms from the convenience of their own computer or mobile device.

FormFast’s pre-registration solution is a web-based application that doesn’t require the patient to download an app and can be accessed from any web browser.

Give your patient an easy way to access intake forms from any device or operating system they choose.

Providing patients with more convenient ways to complete admissions forms, you will see an increase in patient engagement and a greater percentage of patients who pre-register for treatment.

COLLECT PATIENT DATA BEFORE CARE

FormFast serves as an add-on to your EHR or patient portal to streamline pre-registration and collect patient-generated data remotely. Documents and data are instantly visible to the care team as the patient completes online forms.

ACCELERATE ADMISSIONS WORKFLOW

Upon a patient’s arrival to their appointment, their documentation has already been reviewed and processed, so admissions are accelerated and treatment is expedited.

INCREASE STAFF EFFICIENCY

By eliminating the manual tasks associated with registration (re-keying data and scanning documents) FormFast reduces admission wait times, decreases labor costs, and allows staff to focus on delivering higher quality care.
**Guided Form View**

FormFast’s innovative Guided Form View walks the patient step-by-step through the forms they need to complete.

As the checkboxes are checked, secondary follow-up questions are dynamically displayed to collect more information relevant to the patient.

The intuitive, app-like user experience promotes health literacy and ensures that patients complete forms properly.

**Image Capture for Insurance Data**

One of the requirements for pre-registration is collecting insurance information from the patient.

FormFast allows your patients to take a picture of their insurance card and attach it to the form so it can be processed before they arrive at the facility.

For patients without the ability to submit an image of the insurance card, they can type their information in to the FormFast form.

**Electronic Signature**

Forms requiring signatures are traditionally signed at the admissions station, but now signatures can be collected ahead of procedures with FormFast’s eSignature capabilities.

Using their mobile device, patients can sign with their finger to capture a digital signature that looks like it was handwritten.

For patients without mobile devices with signature functionality, they can type their name, and FormFast will create the appearance of a signature to serve as proof of their consent.

**EHR Integration**

FormFast integrates with all major EHR systems to improve how information is shared between patients and providers.

Using HL7 and FHIR protocols, FormFast reads and prefills data from the EHR into forms to expedite form completion and reduce errors.

Data and forms collected by FormFast can be shared with the EHR or other systems to provide real-time information to the care team before the patient even arrives for treatment.

**USES for ACUTE CARE**

- Inpatient Surgery
- Outpatient Surgery
- Maternity
- Endoscopy
- MRI/CT/Ultrasound
- Mammogram
- Cardiac Surgery

**USES FOR PHYSICIAN’S OFFICES**

- New Patient Intake
- Pre-Visit Diary
- Patient Information Update
